Composites Science and Technology **38** (1990) 391–392

SUBJECT INDEX TO VOLUME 38

Accelerated creep characterization, 103
ACK model, 69
Acoustic emission, 284
Amination, 1
Ammonia plasmas, 1
Anisotropic constituents, 229
Aveston, Cooper, Kelly theory, 69

Bulk modulus, 236

Carbon fibre composites (shear properties), 299
Carbon fibre/PEEK composites, 272, 299
Ceramic matrix composites (CMC), 69
CFRP
  impact perforation, 119
  shear properties, 299
Chemorheological behaviour of polyesters, 339
CMC, 248
  strength of, 69
Coated fibre composites, 247
Compression failure wood polymer composites, 159
Concentric cylinder models, 231, 247
Contact angle measurements, 2
Contact loading (static), 47
Contact loads (impact), 43
Crack growth (stress corrosion), 27
Crack growth rate (stress corrosion), 30
Creep response (off-axis composite), 103
Cross ply laminates (damage), 85, 146

Damage
  cross plied composites, in, 85, 146
  parameter (Poisson's ratio), 85
Delamination
  impact, on, 128
  resistance, 211
Differential scanning calorimetry (DSC), 345
Double cantilever beam test (DCB), 214
DSC, 345

Edge delamination, 143
Elastic properties, 229
End-loaded split tests (ELS), 214
End-notch flexure tests (ENF), 214
Energy equivalence principle, 232

Fibre strength (effect of plasma treatment), 11
Fibre surface treatments, 1, 6
Fibre/matrix load transfer, 271, 282
Finite element
  analysis (Iosipescu test), 305
  model (conductivity), 204
Fracture toughness (ud short-fibre composites), 175
Fragmentation tests, 283
Free-edge delamination, 154

Glass/Nylon composites, 211
GRP (stress corrosion cracking), 23

Composites Science and Technology (**38**) (1990)—© 1990 Elsevier Science Publishers Ltd, England. Printed in Great Britain

High-velocity impact loading, 133
Hole sensitivity (of laminates), 271
Hygrothermal conditioning (CFRP), 359, 364

Impact
  damage, 121
  perforation (CFRP), 119
Interfacial adhesion, 6
Iosipescu shear test, 299

Large deflexion theory, 55
Load transfer (fibre/matrix), 271, 282
Low-velocity impact, 123

Master curve (creep of SMC), 115, 116
Matrix cracking, 143
Metal fibre reinforced ceramics, 69
Micromechanical characterization (non-linear), 371
Modelling (continuous fibre composites), 328

Non-linear viscoelastic behaviour, 371

Peel strength, 11, 16, 18
Plasma treatment (fibre surfaces), 1, 6
Poisson's ratio as a damage parameter, 85
Polyester composites (processing), 339
Polymer impregnation of wood, 159
Prepreg ageing (CFRP), 359

Residual shear strain (cure), 55
Rheology in thermoset processing, 342

Shape of cured laminates, 55
Shear
  failure modes, 317
  lag analysis, 86
  modulus, 314
  strength, 318
  testing (Iosipescu), 299
Sheet moulding compound (SMC), 103
Short-fibre composites, 175
Single fibre models, 271
Single filament fragmentation tests, 283
SMC (sheet moulding compound), 103
Statistical model of conductivity, 199
Strength loss from imapct, 43
Strength of CMC, 69
Strength of laminates with holes, 276
Stress corrosion cracking in GRP, 23
Surface texture (UHSPE), 11, 15

Theory of reinforcement (ud composites), 327
Thermal behaviour in processing polyester composites, 339
Thermal conductivity (ud composites), 199
Thermoelastic model (coated fibre composites), 247
Thermoplastic matrix composites, 211
Transverse ply cracking, 86
Transverse thermal conductivity (ud composites), 199

UHSPE, 1
Ultra-high strength polyethylene, 1
Unsymmetric laminates, 55

Weibull analysis (fibre strength), 16
Wettability, 10, 12
Wood–polymer composites, 159
